FOR USE WHEN ADDITIONAL SUPPORT IS NEEDED BETWEEN PANEL POINTS

Supplemental instructions for the installation of Cross Tube Clips as needed for additional support. Review and follow all warnings and notes specified in Tube Framing Clamp System Installation Guide.

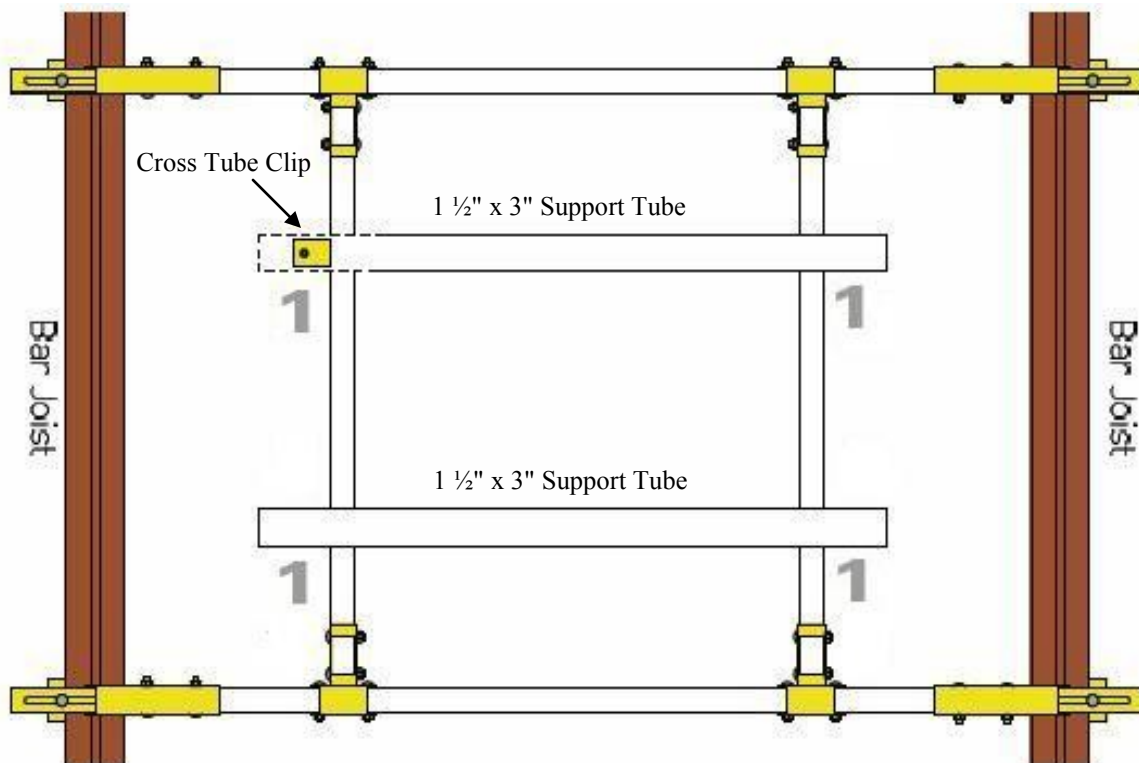

Follow these instructions during Step 11 of the Tube Framing Clamp System Installation

11a

Cut the 1 ½" x 3" Support Tubing to a length that will span and overhang the Cross Tubes by at least 3" on each side. Insert the Support Tube members over the first installed Cross Tube within the desired deck pockets. You may need to slide the Support Tube so that it is braced temporarily over the joist. Install the second Cross Tube.

11b

Slide the Support Tubing into place over both Cross Tube members. Attach the Cross Tube Clips to the Cross Tube and the Support Tubing using the included self tapping sheet metal screws at each position label 1 from the sketch below. Tighten everything.

Assembly is now complete.
